

# Video Signal Driver for DVD Player Monolithic IC MM1623XFBE

## Outline

This 6ch video driver IC was developed for use in DVD players/recorders.

The LPF that attenuates the DAC noise element has a built-in switching function to handle both progressive and interlace signals. In addition, the driver structure is 6db, 75Ω x 2 lines.

Also, the number of external ESD protection diodes has been reduced thanks to the S1/S2 DC superimpose function and reinforced output pin ESD protection element.

## Features

1. 75W driver can drive 2 lines.
2. S/N=63dB typ.
3. Built-in 6dB amp.
4. Built-in filter switching function for progressive/interlace signal
5. Built-in high performance 4th LPF.
6. 0.75MHz/100kHz max. ±1.0dB 27MHz/100kHz typ. -40dB
7. +/- 15KV ESD for aerial discharge.
8. S1/S2 Built-in DC superimpose function.
9. Control pin allows component circuit to handle RGB signals.
