DUAL VIDEO 6dB AMPLIFIER WITH 75Ω DRIVER

■ GENERAL DESCRIPTION

NJM2267 is a dual video 6dB amplifier with 75Ω drivers for S-VHS VCRs, HI-BAND VCRs, etc..Each channel has clamp function that fixes DC level of video sighal and 75Ω drivers to be connected to TV monitors directly. Further more it has sag corrective circuits that prevent the generation of sag with smaller capacitance than ever.

Its operating supply voltage is 4.85 to 9V and bandwidth is 7MHz.

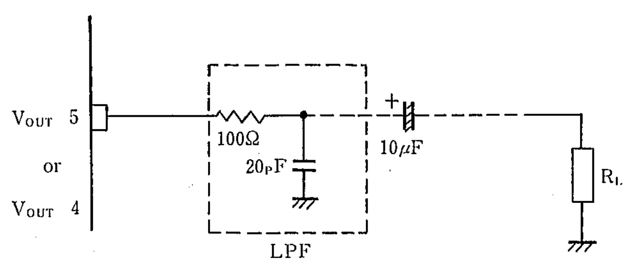
■ APPLICATON

Oscillation Prevention

It is much effective to insert LPF (Cutoff Frequency 70MHz) under light loading conditions (R_L≫1kΩ).

This IC requires 1MΩ resistance between INPUT and GND pin for clamp type input since the minute current causes an unstable pin voltage.



■ **TERMINAL FUNCTION**

(V⁺=5.0V, Ta=25℃)

PIN No.	PIN NAME	SYMBOL	EQUIVALENT CIRCUIT	FUNCTIONS
1	Input Clamp Terminal	V_{IN1}		Input terminal of 1V_{P-P} composite signal or Y signal. Clamp level is 1.9V
2	GND	GND		Ground
3	SAG correction	V_{SAG1}		SAG caused by a coupling capacitor of the output can be prevented by connecting this tarminal with the output terminal through an external capacitor.(see block diagram) When SAG correcting function is not necessary, this terminal must be connected with pin "4" directly.
4	Video Output1	V_{OUT1}		Output terminal that can drive 75Ω line.
5	Video Output2	V_{OUT2}		Output terminal that can drive 75Ω line.
6	SAG correction	V_{SAG2}		SAG caused by a coupling capacitor of the output can be prevented by connecting this terminal with the output terminal though an external copacitor.(see block diagram) When SAG correcting function is not necessary, this terminal must be connected with pin "5" directly.
7	V⁺	V⁺		Supply Voltage
8	Input Clamp Terminal	V_{IN2}		Input terminal of 1V_{P-P} composite signal or Y signal. Clamp level is 1.9V.
