description

The SN54LVC04A hex inverter contains six independent inverters designed for 2.7-V to 3.6-V V_{CC} operation, and the SN74LVC04A hex inverter contains six independent inverters designed for 1.65-V to 3.6-V V_{CC} operation.

The 'LVC04A devices perform the Boolean function $Y = \overline{A}$.

Inputs can be driven from either 3.3-V or 5-V devices. This feature allows the use of these devices as translators in a mixed 3.3-V/5-V system environment.

[†] Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. The input negative-voltage and output voltage ratings may be exceeded if the input and output current ratings are observed.
2. The value of V_{CC} is provided in the recommended operating conditions table.
3. The package thermal impedance is calculated in accordance with JESD 51-7.
