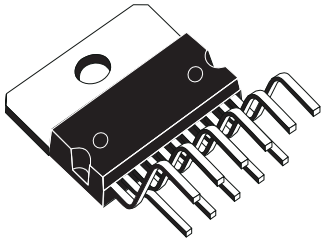
TDA7292

40 W + 40 W stereo amplifier with mute and standby

Datasheet – production data

Features

- Wide supply voltage range (up to ± 33 V)
- Split supply
- High output power
- 40 W + 40 W into 8 Ω
  with V_S = ±26 V and THD = 10%
- No “pop” at turn on/off
- Mute (“pop”-free)
- Standby feature (low I_q)
- Short-circuit protection
- Thermal overload protection



Multiwatt11

Description

The TDA7292 is a class-AB dual audio power amplifier assembled in a Multiwatt package.

It has been specifically designed for high-quality sound applications such as hi-fi music centers and stereo TV sets.

4 Mute and standby modes

Pin 5 (MUTE/STANDBY) controls the amplifier status by two different thresholds referenced to $+V_S$ as given in *Table 5* below. See also *Table 4: Electrical specifications on page 6*.

Table 5. Mute and standby thresholds on pin 5

Nominal voltage on pin 5, V_{PIN5}	Mode	Remarks
> $+V_S$ - 2.5 V	Standby	Output stages turned off
> $+V_S$ - 6.0 V, < $+V_S$ - 2.5 V	Mute	Output stages turned on, amplifiers muted
< $+V_S$ - 6.0 V	Play	Amplifiers active

5 Applications information

Warning: SOA protection:

If the TDA7292 is operated without a load connected to the output terminals, the SOA protection circuit could be activated when a high amplitude and high frequency signal is applied to the input.
The frequency and amplitude of the signal able to trigger the protection is a function also of the supply voltage level used. If the above mentioned condition is possible when the speakers are not connected, it is recommended to connect the input to ground or add a dummy resistive load. For example, a 1-kΩ / 1-W resistor can be used at Vcc = ±26 V. If a lower supply voltage is used, the resistor value must be decreased accordingly.
